TECHNICAL PROJECTS

The Iraqi Student   [CODE](#) | [DEMO](#)
An arabic web app that contains the info about univeristies that every Iraqi student may need to know before applying.
+   Environment: Python using Django rest framework and Postgres for the backend and CSS, HTML and JavaScrip using Vue.js and BootstrapVue for the frontend.
+   developed by me and the key thing I learned is how to build a large and meaningful web app that could really help students who just graduated from high school or people who want to know more about universities in Iraq.

Weather App   [CODE](#) | [DEMO](#)
User-friendly web app that tells you the weather status only by typing your location.
+   Environment: CSS, HTML and JavaScrip using React.js framework, ReactBootstrap for styling and Utilized Metaweather APIs.
+   Leading the development process of the app with two developers taught me how to work and communicate with others and be responsible for the team to deliver high performing app.

Find Yours   [CODE](#) | [DEMO](#)
With its unique idea, Find Yours is a web app that helps people find their lost items.
+   Environment: HTML, CSS, JavaScrip using React.js and Material UI with firebase for the backend.
+   As the final project for my Iraq React Bootcamp, I learned how to best utilize Agile Methodology in software development and work with lead engineer and junior developers.

WORK EXPERIENCE
